

ABSTRACT OF THE DISCLOSURE

1
2 A compressed stainless steel burner comprises top plate, bottom plate
3 and dividers inside of it. Two stainless steel plates have saw-teeth on both
4 sides of each plate and the saw-teeth of the top plate are folded to wrap the
5 saw-teeth of the bottom plate after compressing to form a burner. A venturi
6 shape tube at the entrance of the burner facilitates the air entering the burner
7 and mixed with the injected gas. Inside of the burner there are two dividers
8 with several erect panels on it to divert the mixed gas to both side of the
9 burner.
